HEALTH INFORMATION FOR PATIENTS FOLLOWED IN THE GYNECOLOGIC ONCOLOGY SERVICE

Chemotherapy for Vaginal Cancer

FROM CANADIAN CANCER SOCIETY:

What is chemotherapy
Chemotherapy is a method of treating cancer by using drugs. Often, a combination of chemotherapy drugs is used.

How chemotherapy works

- Cancer cells grow in an uncontrolled way. Chemotherapy drugs slow or even stop the cancer cells from growing, multiplying or spreading to other parts of your body.

- Chemotherapy is a powerful treatment affecting the whole body, so healthy cells can also be damaged. This damage to healthy cells causes side effects. The damage is mostly temporary and the healthy cells will repair themselves.

- Everyone is different and everyone’s cancer, treatment and side effects are different. Talk to your healthcare team about your situation. They can suggest ways to manage your side effects.

For more information please talk to your doctor or visit the Canadian Cancer Society website:
